Subject: TZW Sampling off RPac

Roger,
I wanted to give you a head's-up that I'd like to call you and/or Sean G tomorrow or Friday to discuss SLLI doing TZW sampling off the RPac plume. During the EPA/LWG 6/21 mtg, I understood we left the TZW sampling issue as..., SLLI would further evaluate upland GW plume information and LWG-generated TZW data to determine if TZW data should be collected by SLLI, and if so where, when, and how.

I understood the LWG met and SLLI offered to evaluate the information themselves rather than have the LWG do it. This has been called a "handoff" similar to what NW Natural is doing at the Gasco site.

Anyway, please reply or leave me a v-mail message (229-6825) letting me know if you are available Thurs or Fri. I'm out of the office rite now.
Thanks,
Jim A
